Rega RB250

The RB250 uses the same arm tube as the RB300 but substitutes the stainless end stub for a threaded plastic version and the counterweight is black painted steel rather than tungsten or stainless steel.

Description

The lateral bearing housing is in brass and the vertical bearings are on either side of the arm tube, with the VTF dial omitted.

Early models came with a lacquered steel counterweight rather than black and recent photographs suggest that Rega has now returned to this silver counterweight on it's Rega branded RB250s.

Specifications

Effective length: 237mm

Overhang: 15mm

Offset: 22 degrees

Mounting distance: 222mm

Mounting hole: 23mm

Effective mass: 12g

Cartridge weight range: 4 to 11g

Review

The ultimate budget arm? Refined, detailed, sweet and natural.
